- Very **easy to install** and have **no maintenance**
- Controlled with **smart thermostats or manually**
- **Manual, App and Voice Commands** (Alexa & Google Home)
- Have **2-5 years of Warranty**

HOW DOES FAR INFRARED HEATING WORK?

FAR INFRARED HEATING IS NON-CONVECTIVE

Instead of heating the air directly, Far Infrared Heaters first heat all surfaces (walls, ceiling, floor, furniture, people etc.) and then the surfaces give the heat back to the environment and heat the air. Thus the heat stays always longer in the heated area. You do not need to run the Far Infrared Heater all the time to maintain a comfortable temperature because the heat will be accumulating inside the surfaces. Every next day and week you will use Far Infrared Heaters less and less, which will guarantee you extra savings on the electricity.

The Far Infrared Heating feels like the Sun and all our products keep emitting a heat after they are turned off, which is very different from any traditional type of heating.

FAR INFRARED HEATING IS 100% ORGANIC

Infrared heating is a natural way of obtaining heat, just as in nature from the sun. It is therefore a completely safe type of heat. Heat is created by far infrared radiation. It is the same kind of heat that we feel from the environment heated by the sun. In other words, it is radiant heat that radiates naturally. In fact, absorbed and radiated back by the environment, waves are comfortable for humans. These waves are called far-red and mid-red radiation.

FAR INFRARED HEATING ELIMINATES DAMPNES

One of the many features of infrared heating is that it eliminates dampness in rooms and buildings and prevents the formation of more damp. Dampness affects human health as it is an ideal breeding ground for bacteria and fungus. For instance, convection heaters work in the opposite way, heating the air rather than the room. Hence this creates ideal conditions for condensation. Thus, the infrared heating is the best heating solution for many people.

WHAT WILL BE THE HEATING COST?

- 1kw of electricity cost in Spain and EU countries \approx 20 cents/hour
- The average running time of 4-5 hours per day over the heating season of 4 months (120 days).

Calculations for a room of 8-14m²

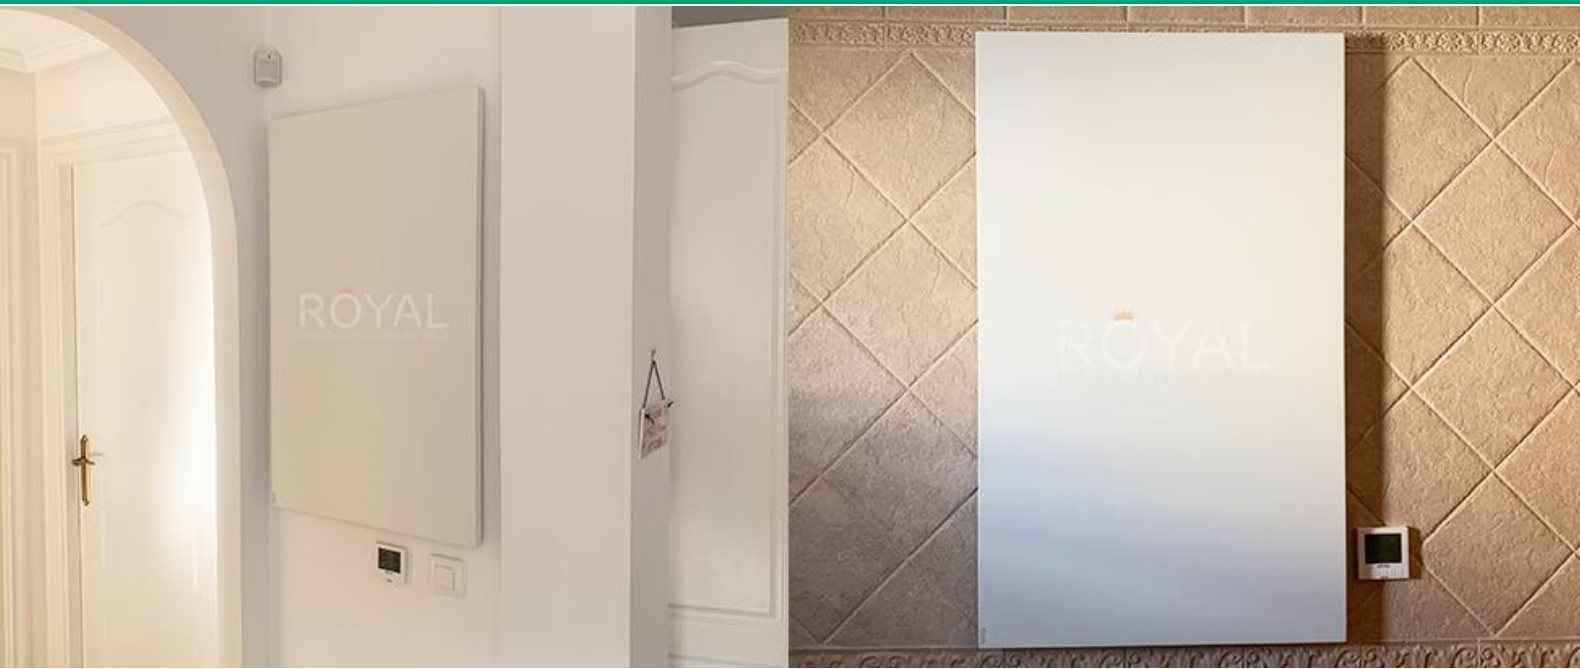

0.58 kW (Panel 580W) x 5 hours x 20 cents x 120 days \approx 70€/winter season

Calculations for a room of 14-20m²

0.9 kW (Panel 900W) x 5 hours x 20 cents x 120 days \approx 108€/winter season

You can use our Wattage Calculator to get an estimated power you need for all your rooms. Scan the QR code to open it online!

WHITE & FRAMELESS FAR INFRARED PANEL HEATER "DOMUS"

www.royal-infrared.es/panels

White & Frameless Far Infrared Panel Heater "Domus" by Royal Infrared Heating is the ideal solution for heating apartments and houses, all indoor areas.
